

ASP.NET DEVELOPER

Job Description

POSITION SUMMARY

The ASP.NET Developer is responsible for overall product development. She/he manages day to day development activities on targeted accounts and/or targeted areas of functionality within a team environment.

- The Customer relies on the Web Developer to build software and provide ongoing support so they can achieve the desired functionality that meets their business objectives.
- The Business Analyst relies on the Web Developer to build software that meets specific business requirements of customers as outlined, ensuring consistent processes through use of internal tools.
- The Company relies on the Web Developer to successfully follow internal coding standards and ensure development deliverables are met on-time, on-budget, and with high quality.

Essential Job Functions:

- Develop carrier, agency & consumer web applications according to specifications or business requirements.
- Ability to analyze business requirements and translate these into web design documents and technical specifications.
- Ability to work with a diverse project team, including .Net Developers, Database Developers, QA Staff, Business Analysts, and Project Managers.
- Maintain and debug existing web modules.
- Perform unit testing of modifications and enhancements to ensure system integrity.
- Understands Insuresoft's products, release schedules, organizational structure and business goals/objectives.
- Develops a working knowledge of product, including its configurability options and available functionality.
- Utilizes internal defect tracking software as projects are completed and on an ongoing basis as required.
- Works with minimal supervision; typically reports to a manager or a director.
- Relies on broad experience and judgment to plan and accomplish goals.
- Requires a certain degree of creativity or latitude to accomplish position responsibilities.
