

## Digital Platform

Engage clients, agents, and partners across the entire insurance lifecycle.

Innovation is driven through established and new distribution channels. Unlike traditional partnerships, we incubate new offerings through a guided process tied to practical success metrics.

Once proven, we pre-integrate those partners to accelerate the launch process and reduce integration costs.

- **Technology**

The Diamond Platform is more than a back-office transaction engine. It is the hub that allows frictionless transactions between the insurer, agent and policyholder. Diamond allows data to flow in and out with easy accessibility and public facing APIs.

- **A Collaborative Environment for Innovators**

Insuresoft is a member of the Kaboodle Team – an insurance collaborative that delivers innovative products and services to insurers. Insuresoft pre-integrates the partners our clients and prospects choose to use.

# Deliver the experience your customers expect in today's digital world.

Insuresoft's Digital Platform allows insurers to manage clients, not policies, with client-level views and analytics while supporting the channels your agents, insureds, and prospects choose to use.

## Our Digital Platform

### Mobile

Provide the mobile experience your policyholders demand with Diamond Mobile. Policyholders can access their policy information to check the status, make payments, view or print policy documents, report losses or contact their agent. Diamond Mobile extends Diamond Policy, Billing, and Claims information and functionality to policyholders via mobile or tablets.

### Portals

Pre-configured web portal access for both agents and policyholders. Decide how much information and functionality to extend to users and then benefit from one code base that supports all user types.

### Customer Communication Management (Publisher)

A flexible customer communication management print solution that can be used with all Diamond components. Declarations, coverage forms, invoices, notices, claims and underwriting forms can be managed and customized in one place. Documents are saved in their original state, so they can be reviewed or reprinted when needed.

## About Insuresoft

Insuresoft is a privately held independent software vendor with offices in University Park, IL and Tuscaloosa, AL. Insuresoft's flagship product, Diamond, is a digital insurance platform comprised of policy, billing, claims and analytics modules that are utilized by property and casualty insurers. The platform processes all personal and commercial lines of business across all 50 states. Insuresoft's clients span the continuum from start-up MGAs to some of the largest carriers and brokers in the United States.
